HOME COMPOSTING TRIALS AND THE RESULTS.

Our products have composting capabilities that are certified for industrial composters, but we believe that they are suitable for home composters too.

We put our products to the test!

We put all of our products suitable for industrial composting in a home composter for **12 weeks** and tracked their progress with **4 and 8 week** updates.

Heavyboard With
PLA Inner Lining

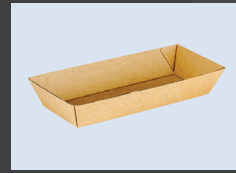

Kraft Board With
PLA Window

Paper Straw

Supa Flute

Week 4

Week 8

Week 12

Palm Leaf

Natural Fibre

Kraft Napkin

Week 4

Week 8

Week 12

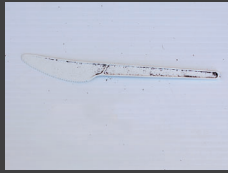

PLA Lid

PLA Cutlery

Wooden Cutlery

Week 4

Week 8

Week 12

We found that our **Kraft board** and **Natural fibre products** fit right in with the composter and loved the environment so much it became a part of it. Whereas 100% PLA products and wooden products are more stubborn to conform to the home composter and clearly belong in the industrial composter.

This might not be a certification, but it shows how compostable our products are!
